PROFILE

Creative and detail-oriented Computer Science student with a strong passion for UX/UI design. Experienced in designing user interfaces, user flows, and system structures. Possesses a foundation in data processing and machine learning, with the ability to support user-centered and intuitive design solutions. Eager to learn and grow in real-world UX/UI projects.

EDUCATION

Suan Dusit University

Bachelor's degree in Computer Science, 2.98 GPA

Bangkok, Thailand

August 2022 – Present

TECHNICAL SKILLS

Design Tools: Figma, Draw.io, Canva

Programming Languages: Python, JavaScript, TypeScript, HTML, CSS

Libraries & Frameworks: Playwright, Node.js, Pandas, NumPy, scikit-learn, Matplotlib

Machine Learning: K-Means, Agglomerative Clustering, TF-IDF

Tools & Platforms: Git, Jupyter Notebook, CapCut, OBS Studio

WORK EXPERIENCE

Carmen software

December 2025 – February 2026

QA Tester Intern, UX/UI Designer Intern

- Conducted system testing for the Blueledgers platform across multiple modules.
 - Created test cases and test scenarios to validate system functionality.
 - Developed automated testing scripts covering all modules and functions of the Blueledgers platform.
 - Designed the interface for an internal web system to manage automated test execution and results.
-

PROJECTS

Calendar Website

November 2025

Created a calendar website for La-or Utis School to simplify activity scheduling and event management across all four campuses, in collaboration with a team of five members.

- Designed the complete UX/UI structure of a calendar website, including user flow and layout planning.
 - Created key user interfaces such as Login, Register, and Event Creation pages.
 - Improved usability by designing intuitive navigation and user-friendly interactions.
-

AUCC 2026 Conference

June 2025 – February 2026

Text comment clustering using TF-IDF with Agglomerative and K-Means Clustering (Team Project, 2 Members)

- The research was presented at AUCC 2026 (Asian Undergraduate Conference on Computing) and received a Very Good rating.
 - Processed and cleaned text data from YouTube® comments for clustering analysis.
 - Applied TF-IDF vectorization and built K-Means and Agglomerative Clustering models to group comments by similarity.
 - Evaluated performance using Silhouette Score and Elbow Method, visualizing clusters with TruncatedSVD and Matplotlib.
-

Online Karaoke System

January 2025 – December 2025

Developed an online karaoke website with integrated social features (Team Project, 2 Members)

- Designed the complete UX/UI flow of the karaoke website, including user interface layouts, navigation structure, and interactive components.
- Created system diagrams such as Activity, Sequence, Use Case, Class, and ER Diagrams to visualize system architecture.
- Developed K-Means and Agglomerative Clustering models using TF-IDF to group users based on registration data.
